Summary

Software Developer with 2 years of experience. Proficient at developing quality, maintainable, scale-able and modular code. Adept in handling multiple developers, steering them towards solutions. Inclined towards solving challenging design/architectural problems and delivering awesome code. Inculcating best coding/development practices. Ability to motivate and influence people around me. A team member you can count on. A good listener and trying to be a good speaker as well. Tea lover, and I make a good one, whenever I do.

Work Experience

DataGrokr

Bengaluru, India

SOFTWARE ENGINEER | TEAM LEAD

Jan. 2018 - PRESENT

- Product Development
 - Worked in an agile environment leading a scrum team of five developers to build a change data capture (CDC) tool from scratch using Python AWS Lambda and various AWS services.
 - Served as a thought partner for the onshore principal engineer and was involved extensively in code/PR, design reviews.
 - Created Jenkins CI/CD pipeline and AWS infrastructure from ground zero.
- Telematics Project
 - Instrumental in migrating and re-engineering of a near-real-time telematics system (handling 25M+ daily hits) for one of the fortune 100 companies.
 - Developed a search API from scratch using serverless architecture and Elasticsearch.
 - Added new features and optimized the existing ones
- Big Data Project
 - Migrated code from SQL server to Hive.
 - Built scheduling jobs using Oozie.
 - Developed benchmarking framework in Python.
